

Rooftherm Polyurethane Spray Foam UK

Roof Insulation, Foam Insulation, Spray Foam, by Rooftherm. From today, {jumi [phpscripts/date.php]}, please Call Free 0800 084 2887 for lowest prices, free roof survey and estimates. Roof insulation or foam insulation is a spray foam application and typically takes only 1 - 2 days to complete all work on most domestic properties and usually requires no scaffolding. The spray foam contains no off gases and is inert, safe and clean. The whole process causes little disruption save serving up a few cups of tea!

Rooftherm's service involves installation of roof insulation and repairs to the roof, checking condition of all slates, tiles, leadwork and cement/sand/lime pointing. Perished back-pointing or touching and poor insulation performance can all be solved by using polyurethane spray foam. Foam Insulation Rooftherm's high density rigid polyurethane foam insulation has been tried and tested for over 25 years. The pitched roof foam insulation system bonds tiles and slates together giving a seamless weather resistant barrier.

Roof Problems Our roof surveyors will inspect your roof for roof problems and provide free advice on all your options and provide a full written quote for any work you may want to consider. Rather than a new or expensive re-roof, Rooftherm will survey a roof to see if a roof renovation and spray seal polyurethane foam system will bond the roof and provide a long term cost effective solution.

Polyurethane foam The non-toxic and odourless polyurethane foam spray is suitable for almost all situations. Being British Standard Class1 fire rating it meets Building Regulations for use in public buildings. The polyurethane foam is 95% closed cell meaning that it maintains the breathing properties of roof timbers so no damp can be trapped by Rooftherm's foam. Spray Foam The

installed polyurethane spray foam is inert, is non toxic, odourless and does not off gas as is the case with formaldehyde type foams. It will have no effect on those susceptible to respiratory problems. The spray foam has no nutritive value and does not attract vermin. Rooftherm's foam spray forms a airtight, seamless and weather resistant barrier suitable for all roofs. It is a very effective and economical solution to all roofing and insulation problems. Request a free roof survey today.

Roof Insulation Key Features Rooftherm are a national UK roof insulation and spray foam contractor. Polyurethane spray foam roof insulation is quick to install, insulates, sound proofs and stabilises with negligible loading. Spray foam seals and prevents wind blown rain and debris from entering the loft. Creates a warm and usable loft space. Guaranteed for 25 years. Rooftherm apply polyurethane foam by a hot weld to

120 degrees and 600 psi. This ensures an excellent bond with the substrate and is the best way to apply roof insulation by polyurethane spray foam. The polyurethane foam factory comes to you! Far less cost than a new roof or re-roof.

Eliminates slipping tiles or slates, nail fatigue and broken tile nibs problems cured. Polyurethane foam is light but strong, negligible roof loading and strengthens the roof. Foam has excellent thermal and sound insulation qualities. 3 to 10 times more effective than other comparable insulators. British Standard polyurethane foam to Class 1 fire rating, resists the spread of flame. 95% closed cell formulation ensure timbers breath and let damp/wet out preventing timber rot. Is weather resistant, prevents wind blown rain and snow from entering up through slates and tiles. Leaves your loft warm in winter and cool in summer.

Sounds proofs, bonds, insulates, weather resistant and maintenance free

25 year guarantee.
